Wiring and Installation Instructions.

Why upgrade?

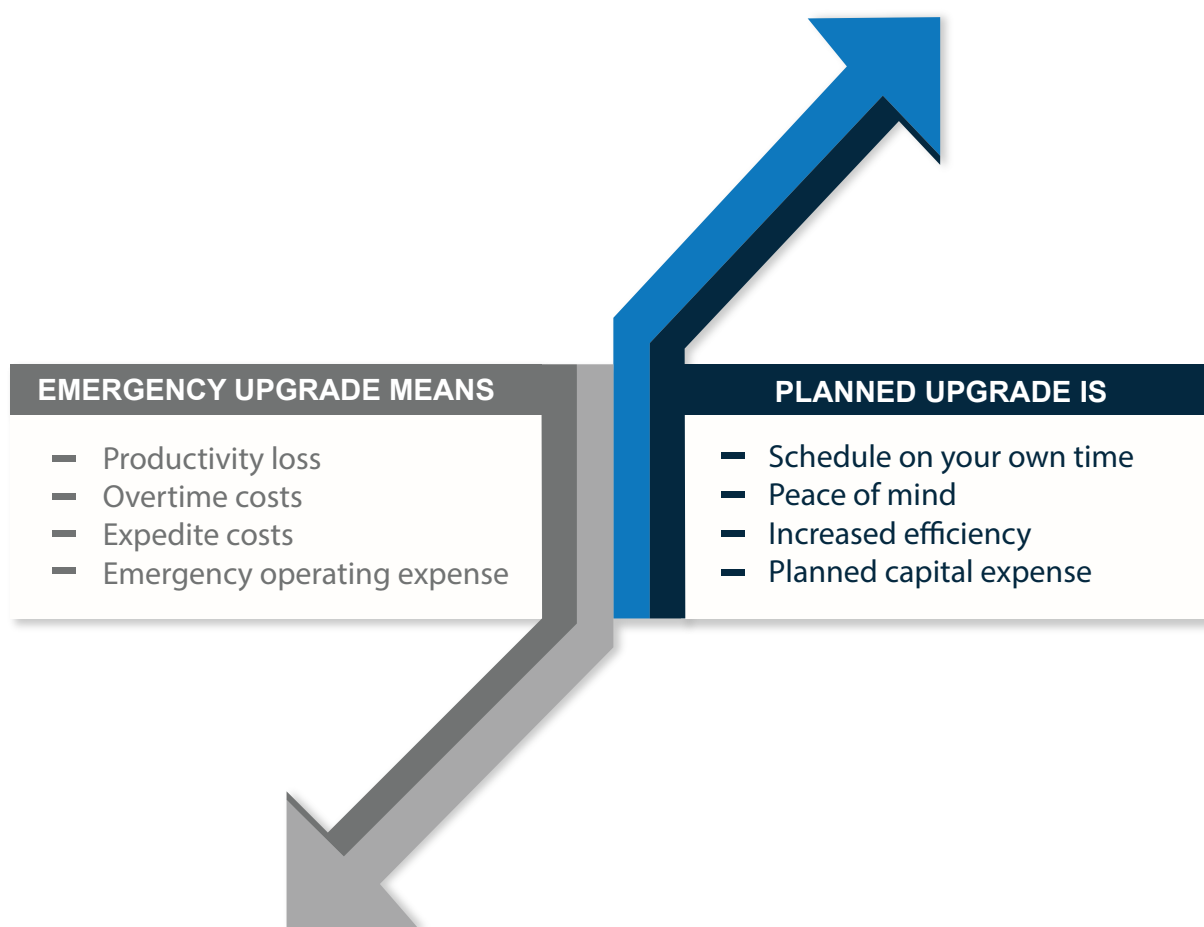

Controls will fail eventually, often without warning and, inevitably, at the worst possible time. At AAON Controls, we believe the right time to perform an upgrade is before the HVAC controls system quits working. If your controller is more than 10 years old, contact your local AAON rep to start planning for a replacement before it fails.

Downtime is expensive! If a facility goes down, it can cost thousands of dollars a day. In some cases, it can even cost millions. For example, if a unit goes down in a hospital, it can cost around a million dollars each day the unit is down. AAON Xtend allows you to mitigate this potential downtime before it becomes costly for you.

When a crisis strikes, you and your building management will make choices based on time and availability rather than cost of ownership, customer service, support or other important, but not urgent, factors. An AAON Xtend upgrade can reduce your stress, prevent spending too much in a crisis, and mitigate downtime issues with a proven product and dynamic support team.

Proactively upgrading your HVAC controls allows the installation to be done outside normal business hours to limit inconvenience and cost.

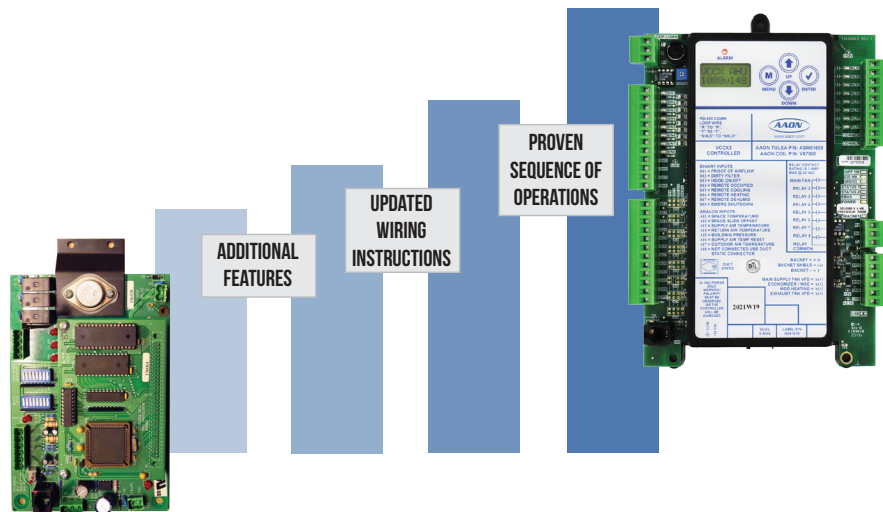

Why choose an AAON controller upgrade?

AAON Orion controllers have been installed on more than 20,000 AAON units over the last two decades. If quality, serviceability, and longevity are the qualities you are after, AAON Xtend will help you get there. Maximize your AAON equipment's life by upgrading your HVAC control system to our latest technology.

“Provide the end user the opportunity to have the best experience and the lowest total cost of ownership.”

- Michael Balfoort
Kilmer Environmental

By simply upgrading the controls system, you will take full advantage of the original long-term investment on an AAON unit.

What can be upgraded?

- ☒ AAON legacy controls
- ☒ Third party controls
- ☒ Units with no controls

AAON Controls and your local rep can support you at every point in the upgrade process. AAON Xtend means easier field updates, improved and additional features, and proven sequences of operations.

AAON® Xtend consists of unique Upgrade Packages designed to provide a complete upgrade path from your current controller to our latest controls solution.

These packages include the unit controller, sensors, modules, cables, wiring diagrams, and wiring instructions – everything needed to complete a successful upgrade. In addition, we include a decal to apply to the unit clearly indicating it has been upgraded. AAON tracks the upgrade information so even several years from now, we can provide you with specific information helpful for troubleshooting and maintenance.

Provide your local AAON Rep with the unit's serial number and start reducing your list of worries.

Designed with you in mind:

Our objective is to make this process as painless as possible. Our team works in synergy with your local rep to provide a comprehensive bill of materials for your upgrade. We also provide the same technical support you and your team are accustomed to.

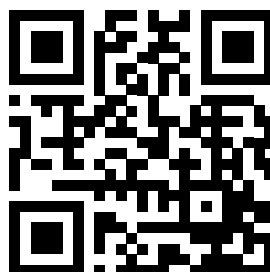

Example of an Xtend Upgrade Package

Two Simple Steps:

Step 1: Gather the Serial Number for every AAON unit needing an upgrade.

Step 2: E-mail this information to your local **AAON Rep.**

Based on the unit's wiring diagram, you will receive a quote with the appropriate VCCX2 Upgrade Package. With this quote, you will receive a second file with important notes and wiring information.
