#### System Manager SD

### UPDATING THE SYSTEM MANAGER SD

### **Updating the System Manager with Prism 2**

#### Updating the System Manager SD with Prism 2 Version 4.5.0 and higher

The Modular System Manager SD is equipped with the ability to update its software with the use of a computer. You will need the following before you begin:

- Modular System Manager SD in need of an update (powered up)
- CommLink 5
- Computer running Microsoft Windows<sup>™</sup> operating system
- Prism 2 software from www.orioncontrols.com or wattmaster,com/techsupport
- Latest version of the System Manager SD software (e-mailed from our tech support staff or downloaded from http://techsupport.wattmaster.com) and software sheet
- USB Driver files from http://techsupport.wattmaster.com or from CD-ROM
- System Manager's communication cable, USB cable, and adapter

# Follow these simple steps to update the Modular System Manager SD:

- 1. Apply power to the System Manager SD.
- 2. Turn on your computer and download the latest Prism 2 software from www.orioncontrols.com.
- 3. Either download and unzip the System Manager SD hex file software from http://techsupport.wattmaster.com, or if you received an e-mail from Tech Support with the file, unzip and save the file to your computer. Record the path and name of the file for later use. Also, print the software sheet provided for future reference.
- 4. Download the USB Driver files from http://techsupport. wattmaster.com or the CD-ROM so that Prism can communicate to the System Manager. See **page 3** for instructions.
- 5. Wire the communication cable into the System Manager's terminal block and then into the CommLink 5 and then connect the CommLink 5 to the computer's USB port. Make sure the USB-Link 2 and System Manager are set to High Speed and Stand-Alone. See Figure 1, page 6.
- 6. Open Prism 2 and Login with the User Name "admin" and password "admin." If successful, "Administrator Access" will appear at the lower right of the Prism program.

 Click on the <Job-Site> icon. The Job-Sites Window will appear. In the Type of CommLink Dialog Box, select "CommLink 5 or USB Link II."

Type of Comm	Link	۲
C CommLink 2	or	CommLink 3
C CommLink 4	or	USB Link
CommLink 5	or	USB Link II

In the *Job-Sites Window*, from the Serial Port drop down list, *select* the USB to UART Bridge Controller COM port. If you don't know the COM port number or if the number is 10 or higher, follow the directions on pages 4 & 5.

9, From Prism 2's Communications tab, *select* "Flash Selected Controller." And from the list *select* "Main Controllers."

## UPDATING THE SYSTEM MANAGER SD Updating the System Manager SD

10. The Flash Main Controller Window will appear.

- 11. Step #1: In the Loop and Unit fields, enter 1 for the Loop and 62 for the Unit.
- 12. Step #2: In the HEX File field, type in the path and name of the HEX file you downloaded and/or copied to your hard drive or *click* the **<Select File>** button to search for the file.
- 13 Step #3: *Click* on the **<Program HEX>** button.
- 14. Step #4: If successful, you should see the HEX File Progress bar showing the progress percentage.
- 15. Step #5: When the Progress Bar reaches 100%, the update should be complete.
- 16. You can verify the correct version of software in the System Manager LCD display.
- 17. For optional verification steps, *click* the **<Advanced>** button on the Flash Controller toolbar. The following window will display:

Optional Verific	ation Steps				
Show Details Fa	ctory Personne	Use This Optior	to Check Com	munication	s Status While Flashing

#### USB Serial Converter and Serial Port Driver Installation

- Insert the USB Driver CD-ROM into your CD-ROM drive or download the USB Driver software file from www.techsupport.wattmaster.com. If using the CD-ROM, go to Step 7. If downloading the file, double-click on the link "USB Driver Setup.zip file for installing USB drivers for all WattMaster Products".
- 2. *Click* **<Open>** when asked to save or open the file.
- 3. Extract and run (**double-click**) USB Driver Setup.exe.

4. Once you unzip the file, the *WattMaster USB Driver Installation Window* will appear. Click **<Install>**. This will unzip the driver installation files to C:\Temp\ Wattmaster USB Drivers.

- 5. *Click* your **<Start>** button and then *click*, **<Computer>**.
- 6. *Double-click* Local Disk (C:). Then *double-click* the Temp folder.

 Double-click the WattMaster USB Drivers folder and then *double-click* the USBInstaller.exe program. Then double-click on the file USB Driver Setup.exe.

Name	Date modified	Туре	Size
USB_FTDI_Setup.exe	11/19/2010 1:34 PM	Application	1,688 Ki
🐖 USB_SiliconLabs_Setup.exe	11/19/2010 1:35 PM	Application	6,722 KE
USBInstaller.exe	12/20/2010 11:25	Application	720 KE

8. The following window will pop up:

🖄 USB Driver	
	Begin Instal
USB_SiliconLabs program and the	re the USB_FTDI_Setup.exe and the _Setup.exe file are in the same directory as thi n select the Begin Install button to install the or all WattMaster Communications devices.

- 9. *Click* **<Begin Install>** and the installation program will walk you through the rest of the steps. The program might prompt you to remove old USB drivers from your computer. *Click* **<Yes>** if so. Once installation is complete, you will need to reboot your computer to have the new settings take effect.
- 10. With successful USB driver installation, you can now connect your USB device.

#### Finding What COM Port Number the CommLink or USB-Link is Using

 Left-click on **<Start>**, located on the bottom left of the Windows Tool Bar.

2. Select <Control Panel>.

3. *Double-click* the System Icon.

4. *Click* the **<Hardware>** tab and then *click* the **<Device Manager>** button.

5. *Click* on the plus sign next to Ports to see all of the common ports.

- 6. *Locate* the USB Serial Port (COM#). The COM# in parentheses is the port it is located on. *Write* this COM port number down. You will need to know this when setting up the Prism software.
- If the COM port number is 10 or greater, go to "Changing the USB COM Port Number" on page 5.

#### **Changing the USB COM Port Number**

When the CommLink or USB-Link is first plugged in, it will be assigned a COM port number to be used for communicating with the Prism software. If the port number is 10 or greater, it needs to be changed to a value less than 10 to be recognized by Prism.

- Click <Start>, click <Control Panel>, click
  <System>, click the <Hardware> tab, and then click
  <Device Manager> to get to the Device Manager Window.
- 2. *Click* on the plus sign next to Ports to see all of the COM ports.

Right-click on "USB Serial Port (COM#)" and select
 <Properties>. In the Properties Window, select the
 <Port Settings> tab.

General Port Settings	Driver Details	Resources	
	Bits per second:	9600	*
	Data bits:	8	*
	Parity:	None	~
	Stop bits:	1	~
	Flow control:	None	~
	Adv	vanced	Restore Defaults

To assign a port number less than 10, *click* on 
 <Advanced>. The Advanced Settings Window will appear.

COM Port Number: COM4	•			OK
USB Transfer Sizes				Canc
Select lower settings to correct pe Select higher settings for faster pe		ow baud rates.		Defau
Receive (Bytes):	4096 💌			
Transmit (Bytes):	4096 💌			
BM Options Select lower settings to correct re-				
Latency Timer (msec):	16 💌			
Miscellaneous Options		Serial Enumerator	~	

- 5. In the COM Port Number drop box, *select* which COM port you wish to use. Make sure you select a COM port number that is not currently in use (you can see the ports in use in the *Device Manager Window*). *Select* a port that is less than 10.
- **NOTE:** Windows<sup>®</sup> will assign a port number to every device that has ever been installed on your computer. So if there are no available ports below 10, choose a port number less than 10 for a device listed that you know you are not currently using.
- Once you select the correct COM port number, *click* <OK> and close any windows opened in the process of changing the port number. Make note of this number because you will need it for your Prism setup.
