Enter The Unit Tag Numbers For To Be Configured Per This Setpo	

Form: VCCX2-ConfigSetpoints-1G-IA.PDF

Based on: SS1088 v. 1.35

Date: 4-2-2020

VCCX2 Cnfg ID: 0001 Sensor Scaling Fahrenheit Use < or > To Change

☐ Fahrenheit

□ Celsius

Check one of the boxes above. Default is "Fahrenheit".

Configuration Screen #2

VCCX2 Cnfg ID: 0001 RSM#1 Installed: NO RSM#2 Installed: NO Use < or > To Change

RSM#1 RSM#2
□ NO □ NO
□ YES □ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #3

VCCX2 Cnfg ID: 0001 RSM#3 Installed: NO RSM#4 Installed: NO Use < or > To Change

RSM#3 RSM#4
□ NO □ NO
□ YES □ YES

Check one of the boxes for each category above. Default is "NO".

Configuration Screen #4

VCCX2 Cnfg ID: 0001 RSMSD Installed: NO RSM Type: VFD Use < or > To Change

RSMSD RSM TYPE

□ NO □ VFD

□ YES □ DIGITAL

Check one of the boxes for each category above. Defaults are "NO" and "VFD".

Configuration Screen #5

VCCX2 Cnfg ID: 0001 EM1 Installed: NO 12RLY Install: NO Use < or > To Change

EM1 12 RLY
□ NO □ NO
□ YES □ YES

Check one of the boxes above for each selection. Defaults are "NO".

Configuration Screen #6

VCCX2 Cnfg ID: 0001 MHGRV Installed: NO EXP Installed: NO Use < or > To Change

 MHGRV
 EXP

 □ NO
 □ NO

 □ YES
 □ YES

Check one of the boxes for each category above. Defaults are "NO".

Configuration Screen #7

VCCX2 Cnfg ID: 0001 MODGS Installed: NO XWR#2 Installed: NO Use < or > To Change

 MODGAS
 XWR#2

 □ NO
 □ NO

 □ YES
 □ YES

Check one of the boxes for each category above. Defaults are "NO".

Configuration Screen #8

VCCX2 Cnfg ID: 0001
Preheat-X
Installed: NO
Use < or > To Change

□ NO□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #9

VCCX2 Cnfg ID: 0001 HVAC Source Supply Air Use < or > To Change

☐ Supply Air

☐ Supply Air/Tempering

☐ Outdoor Air

☐ Return Air

 \square Space Temperature

 \square Space Temperature with High % OA

☐ Single Zone VAV

Check one of the boxes above. Default is "Supply Air".

Configuration Screen #10

VCCX2 Cnfg ID: 0001 HVAC Mode Set By Remote Contact: NO Use < or > To Change

□ NO□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #11

VCCX2 Cnfg ID: 0001 SAT Reset Source No Reset Use < or > To Change

☐ No Reset

☐ Space Temperature

☐ Outdoor Temperature

☐ Return Air Temperature

☐ Fan VFD Signal

 $\ \square \ Remote \ Voltage$

Check one of the boxes above. Default is "No Reset".

Configuration Screen #12

VCCX2 Cnfg ID: 0001 Reset Interval Rate: 30 s [1 - 255 Seconds]

Enter 1 to 255 seconds above. Default is "30 Seconds".

Configuration Screen #13

VCCX2 Cnfg ID: 0001 Space Sensor Type None Use < or > To Change

□ None

☐ Analog

☐ E-BUS Temp/RH

☐ Receive Broadcast

☐ Remote Sensor

☐ Use BACnet Temp/RH

Check one of the boxes above. Default is "None".

Configuration Screen #14

VCCX2 Cnfg ID: 0001 Read Space RH Broadcast: NO Use < or > To Change

 \square YES

 \square NO

VCCX2 Cnfg ID: 0001 Remote Space Sensor Board Address: 0

Enter the address. Default is "0".

Configuration Screen #16

VCCX2 Cnfg ID: 0001 E-BUS SPC/RH Sensor Enable Alarm LED

□ Enable Alarm LED□ Disable Alarm LED

Check one of the boxes above. Default is "Enable Alarm LED".

Configuration Screen #17

VCCX2 Cnfg ID: 0001 Outdoor Sensor Type None Use < or > To Change

□ None

 \square Analog

 \Box E-BUS OAT/ RH

☐ Receive Broadcast

☐ Use BACnet OAT/RH

Check one of the boxes above. Default is "None".

Configuration Screen #18

VCCX2 Cnfg ID: 0001 Return Sensor Type NONE Use < or > To Change

 \square None

☐ Analog

☐ E-BUS Temp/RH

Check one of the boxes above. Default is "NONE".

Configuration Screen #19

VCCX2 Cnfg ID: 0001 Static Pr Control Fan VFD / SZ VAV Use < or > To Change

□ None

☐ Fan VFD / SZ VAV

□ Bypass Damper

Check one of the boxes above. Default is "Fan VFD / SZ VAV".

Configuration Screen #20

VCCX2 Cnfg ID: 0001 Static/Fan Control Rate: 10 s [1 - 30 Seconds]

Enter 1 to 30 seconds above. Default is "10 seconds".

Configuration Screen #21

VCCX2 Cnfg ID: 0001 Static Pr Control Max Adjust: 5% [1 - 30%]

Enter 1 to 30 percent above. Default is "5 percent".

Configuration Screen #22

VCCX2 Cnfg ID: 0001 Fan Voltage Output Min Volts: 0.0 VDC Max Volts: 10.0 VDC

In the first box, enter 0 to 10. Default is "0 Volts". In the second box, enter 0 to 10. Default is "10 Volts."

VCCX2 Cnfg ID: 0001
Fan Cycle Mode
NO
Use < or > To Change

□ NO □ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #24

VCCX2 Cnfg ID: 0001 Fan Runs During Unoccupied: NO Use < or > To Change

□ NO□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #25

VCCX2 Cnfg ID: 0001 Supply Fan Proving NO Use < or > To Change

□ NO□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #26

VCCX2 Cnfg ID: 0001 Return Fan Proving No Return Fan POF Use < or > To Change

□ No Return Fan POF□ Return/Exhaust POF

☐ Return POF w/Supply Fan On

Check one of the boxes above. Default is "No Return Fan POF".

Configuration Screen #27

VCCX2 Cnfg ID: 0001 Fan Starting Delay: -1 s [-1 = Unit Addr x 5]

Enter -1 to 240 seconds above. Default is "-1 seconds". -1 = multiply controller address by 5 seconds.

Configuration Screen #28

VCCX2 Cnfg ID: 0001 Purge Mode Delay: 30 s [0 – 900 Seconds]

Enter 0 to 900 seconds above. Default is "30 seconds".

Configuration Screen #29

VCCX2 Cnfg ID: 0001 Heat Type No Heat Use < or > To Change

☐ No Heat

☐ Staged Only

☐ Mod Heat Only

☐ Modgas-x Then Staged

☐ Mod Heat Then Staged

Check one of the boxes above. Default is "No Heat".

Configuration Screen #30

VCCX2 Cnfg ID: 0001 Mod Heat Volt Output Min Pos Volts: 0.0 Max Pos Volts: 10.0

In the first box, enter 0 to 10. Default is "0 Volts". In the second box, enter 0 to 10. Default is "10 Volts."

Configuration Screen #31

VCCX2 Cnfg ID: 0001 Cool Type Refrigeration Module Use < or > To Change

☐ Refrigeration Module

☐ Staged Only

☐ Mod Only

Check one of the boxes above. Default is "Refrigeration Module".

Configuration Screen #32

VCCX2 Cnfg ID: 0001 Chilled Water Valve 0-10VDC Use < or > To Change

□ 0-10 VDC

□ 2-10 VDC

Check one of the boxes above. Default is "0-10 VDC".

Configuration Screen #33

VCCX2 Cnfg ID: 0001 Chilled Water Valve Direct Acting Use < or > To Change

☐ Direct Acting

☐ Reverse Acting

Check one of the boxes above. Default is "Direct Acting".

Configuration Screen #34

VCCX2 Cnfg ID: 0001 Mech Heat/Cool Alarm Delay: 15 Min

Enter 0 to 240 n	ninutes above	. Default is

Configuration Screen #35

VCCX2 Cnfg ID: 0001 Econo Control Type No Economizer Use < or > To Change

☐ No Economizer

"15 Minutes".

☐ Standard Economizer

☐ IAQ Economizer (Economizer with CO₂ Override)

Check one of the boxes above. Default is "No Economizer".

Configuration Screen #36

VCCX2 Cnfg ID: 0001 Title 24 Economizer: N0 Use < or > To Change

 \sqcap NO

 \square YES

Check one of the boxes above. Default is "NO".

Configuration Screen #37

VCCX2 Cnfg ID: 0001 Econo Control In Unoc Mode: NO Use < or > To Change

 \square NO

 \square YES

VCCX2 Cnfg ID: 0001 Econo Enable Source Drybulb Use < or > To Change

☐ Drybulb

- ☐ Wetbulb (OA RH Sensor needed)
- ☐ Dewpoint (OA RH Sensor needed)
- ☐ Comparative Enthalpy (E-BUS OA RH & E-BUS RA RH Sensors needed)

Check one of the boxes above. Default is "Drybulb".

Configuration Screen #39

VCCX2 Cnfg ID: 0001 Economizer Control Rate: 10 s Prop Window: 10.0°F

In the first box, enter 1 to 30. Default is "10 seconds". In the second box, enter 1.0 to 30.0. Default is "10.0."

Configuration Screen #40

VCCX2 Cnfg ID: 0001 Econo Voltage Output Min Volts: 2.0 VDC Max Volts: 10.0 VDC

In the first box, enter 0 to 10. Default is "2 VDC". In the second box, enter 0 to 10. Default is "10 VDC."

Configuration Screen #41

VCCX2 Cnfg ID: 0001 Econo Relay On When Econo Above Min Pos Use < or > To Change

- ☐ Econo Above Min Pos
- ☐ Above Activation %

Check one of the boxes above. Default is "Econo Above Min Pos".

Configuration Screen #42

VCCX2 Cnfg ID: 0001 Economizer Relay Activation Level Setpoint: 15%

In the box, enter 0 to 100. De	fault is "15

Configuration Screen #43

VCCX2 Cnfg ID: 0001 Ht Wheel Enabled By Econo at Min Pos Use < or > To Change

- ☐ Econo at Min Pos
- ☐ OA Enthalpy

percent".

Check one of the boxes above. Default is "Econo at Min Pos".

Configuration Screen #44

VCCX2 Cnfg ID: 0001 CO2 Sensor Installed None Use < or > To Change

- □ None
- ☐ E-Bus CO2
- ☐ Receive Broadcast
- ☐ Future Use
- ☐ Use BACnet CO2

Check one of the boxes above.

Default is "None".

Configuration Screen #45

VCCX2 Cnfg ID: 0001 Building Pr. Sensor None Use < or > To Change

- \square None
- ☐ Analog
- $\ \ \square \ \ Receive \ Broadcast$
- ☐ Use BACnet Reading

Check one of the boxes above. Default is "None".

Configuration Screen #46

VCCX2 Cnfg ID: 0001 Building Pr. Control None Use < or > To Change

- ☐ None
- ☐ On/Off Exhaust Relay
- ☐ Modulating Exhaust
- ☐ Outdoor Air Damper
- \square Supply Fan
- \square Duct Static Control

Check one of the boxes above. Default is "None".

Configuration Screen #47

VCCX2 Cnfg ID: 0001 Building Pr. Control Rate: 10 Sec [1 – 30 Seconds]

Enter 1 to 30 seconds. Default is "10 seconds".

Configuration Screen #48

VCCX2 Cnfg ID: 0001 Building Pr. Control Max Adjust: 5% [1 - 30%]

Enter 1 to 30. Default is "5 percent".

Exh Fan Volts Min Volts: 0.0 VDC Max Volts: 10.0 VDC

VCCX2 Cnfg ID: 0001

In the first box, enter 0 to 10. Default is "0 VDC". In the second box, enter 0 to 10. Default is "10 VDC."

Configuration Screen #50

VCCX2 Cnfg ID: 0001 Heat Pump Config No Heat Pump Use < or > To Change]

- ☐ No Heat Pump
- ☐ Air/Air Fail to Heat
- ☐ Air/Air Fail to Cool
- ☐ WSHP Fail to Heat
- ☐ WSHP Fail to Cool
- \square Waterside Condenser

Check one of the boxes above. Default is "No Heat Pump".

Configuration Screen #51

VCCX2 Cnfg ID: 0001 WSHP Glycol Percentage: 0% Use < or > To Change

Enter 0-40 in increments of 5. Default is "0%".

Configuration Screen #52

VCCX2 Cnfg ID: 0001
Aux Heat Type
No Aux Heat
Use < or > To Change

- ☐ No Aux Heat
- ☐ Staged Only
- ☐ Mod Heat Only
- ☐ Modgas-x Then Staged
- ☐ Mod Heat Then Staged

Check one of the boxes above. Default is "No Aux Heat".

Configuration Screen #53

VCCX2 Cnfg ID: 0001 Dehum. Control None Use < or > To Change

- □ None
- ☐ Only Occupied Vent
- ☐ Only Vent Anytime
- $\ \square$ All Modes Occupied
- \square All Modes Anytime

Check one of the boxes above. Default is "None".

Configuration Screen #54

VCCX2 Cnfg ID: 0001 Humidity Control Sensor: Space Use < or > To Change

- ☐ Space
- □ Return

Check one of the boxes above. Default is "Space".

Configuration Screen #55

VCCX2 Cnfg ID: 0001 Reheat Control None Use < or > To Change

- □ None
- ☐ On/Off HGR Relay
- ☐ Modulating HGR
- ☐ Unit Heat
- ☐ Mod HGR + Unit Heat
- □ On/Off HGR + Unit Heat
- ☐ Mod HGR + Aux Heat

Check one of the boxes above. Default is "None".

Configuration Screen #56

VCCX2 Cnfg ID: 0001 Airflow Station: Paragon Use < or > To Change

- ☐ Paragon
- ☐ Ebtron

Check one of the boxes above. Default is "Paragon".

Configuration Screen #57

VCCX2 Cnfg ID: 0001 Monitor OA Airflow NO Use < or > To Change

- \square NO
- \square YES

Check one of the boxes above. Default is "NO".

Configuration Screen #58

VCCX2 Cnfg ID: 0001 Control Outdoor Air CFM w/Damper: NO Use < or > To Change

- \square NO
- \square YES

Check one of the boxes above. Default is "NO"

Configuration Screen #59

VCCX2 Cnfg ID: 0001 Control Outdoor Air CFM w/VFD: NO Use < or > To Change

- \square NO
- \square YES

Check one of the boxes above. Default is "NO".

Configuration Screen #60

VCCX2 Cnfg ID: 0001 Outdoor Airflow Duct Size: 0.00 [In Square Feet]

Enter the inside area in sq. ft. of the OA duct/damper, accurate to two decimal places. Range is 0-200. Default is "0".

Configuration Screen #61

VCCX2 Cnfg ID: 0001 Monitor SA Airflow NO Use < or > To Change

- □ VES

Check one of the boxes above. Default is "NO".

Configuration Screen #62

VCCX2 Cnfg ID: 0001 Supply Airflow Duct Size: 0.00 [In Square Feet]

Enter the inside area in sq. ft of the supply air duct/damper, accurate to two decimal places. Range is 0-200. Default is "0".

Configuration Screen #63

VCCX2 Cnfg ID: 0001 Monitor RA Airflow NO Use < or > To Change

- \square NO
- \square YES

VCCX2 Cnfg ID: 0001 Return Airflow Duct Size: 0.00 [In Square Feet]

Enter the inside area in square feet of the return air duct/damper, accurate to two decimal places. Range is 0-200. Default is "0".

Configuration Screen #65

VCCX2 Cnfg ID: 0001 Monitor Exh Airflow NO Use < or > To Change

□ NO□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #66

VCCX2 Cnfg ID: 0001 Exhaust Airflow Duct Size: 0.00 [In Square Feet]

Enter the inside area in square feet of the exhaust air duct/damper, accurate to two decimal places. Range is 0-200. Default is "0".

Configuration Screen #67

VCCX2 Cnfg ID: 0001 Morning Warm Up None Use < or > To Change

□ None

☐ Stand-Alone

☐ Broadcast Fixed to Boxes

☐ Broadcast Max to Boxes

Check one of the boxes above. Default is "None".

Configuration Screen #68

VCCX2 Cnfg ID: 0001 AHU Uses Schedule Number: 0 ['0' For Internal]

Enter 0-8. Default is "0".

Configuration Screen #69

VCCX2 Cnfg ID: 0001 Daylight Adjustment Start Date: 0 Stop Date: 0

In the first how enter 0 to 123

In the first box, enter 0 to 1231. Default is "0". In the second box, enter 0 to 1231. Default is "0".

Configuration Screen #70

VCCX2 Cnfg ID: 0001 Trend Log Rate: 15 Min [1 – 120 Minutes]

Enter 1 to 120 minutes. Default is "15 minutes".

Configuration Screen #71

VCCX2 Cnfg ID: 0001 Emergency Shutdown NO Use < or > To Change

 \square NO

 \square YES

Check one of the boxes above. Default is "NO".

Configuration Screen #72

VCCX2 Cnfg ID: 0001 Dirty Filter NO Use < or > To Change

 \square NO

□ YES

Check one of the boxes above. Default is "NO".

Configuration Screen #73

VCCX2 Cnfg ID: 0001 Broadcast OA Temp NO Use < or > To Change

 \square NO

 \square YES

Check one of the boxes above. Default is "NO".

Configuration Screen #74

VCCX2 Cnfg ID: 0001 Broadcast OA RH NO Use < or > To Change

□ None

☐ Stand Alone

☐ Bcast Fixed to Boxes

☐ Bcast Max to Boxes

Check one of the boxes above. Default is "None".

Configuration Screen #88

VCCX2 Cnfg ID: 0001 Evap Condenser Control: No Use < or > To Change

 \square No

☐ Yes

VCCX2 Configuration Worksheet

Relays #2 through #24 can be individually configured. By using the 7 relay outputs available on the VCCX2 Controller the 5 relays on the VCC-X EM1 Expansion Module, and the 12 Relays on the 12 Relay E-BUS Expansion Module, you have the ability to configure up to a combined total of 24 Heating Stages, Cooling Stages, and the other options listed above. Only the Heating and Cooling relays can be configured with multiple outputs. If any other option is selected more than once, it will simply activate redundant relays but no multiple staging will occur.

VCCX2 Spts ID: 0001 Calibrate Slide Adj At Middle Pos: XXX Enter # Shown: XXX

VCCX2 Spts ID: 0001 Calibrate Slide Adj At Down Pos: XXX Enter # Shown: XXX

Once the slider is in the down position, wait for the value on line 3 to stop changing. Once it stops changing, enter this value on line 4.

Setpoint Screen #9

VCCX2 Spts ID: 0001 Space Sensor Push-Button Override Duration...: 2.0 Hr

In the box above enter a value from 0 to 8.0. The default value is "2.0".

Setpoint Screens #10 & 11

VCCX2 Spts ID: 0001 Controlling Sensor High Alarm Offset Setpoint: 30.0°F

VCCX2 Spts ID: 0001 Controlling Sensor Low Alarm Offset Setpoint: 30.0°F

In the boxes above enter a value from 0 to 50. The default value is "30". Only applies to Space, Return Air, or Single Zone VAV controlled units.

Setpoint Screen #12

VCCX2 Spts ID: 0001 Outdoor Dewpoint Setpoint: 55.0°F

In the box above enter a value from 35 to 80. The default value is "55".

Setpoint Screen #13

VCCX2 Spts ID: 0001 Indoor RH Setpt Disable/Lo Rst: 50% Enable/Hi Rst: 60%

In the first box above enter a value from 0 to 100. The default value is "50". In the second box above enter a value from 0 to 100. The default value is "60". This screen can be used to set the Indoor (Space or Return Air) Dehumidification Enable and Disable Setpoints and to set the Indoor Humidity Reset Range used to reset the Coil Suction (Saturation) Temperature Setpoint during Dehumidification. Please see the instructions for Setpoint Screen #13 in the VCCX2 Controller Operator Interfaces SD Technical Guide for detailed information.

VCCX2 Spts ID: 0001 Coil Temp Setpt Hi Rst Lmt: 45°F Lo Rst Lmt: 40°F

In the first box enter a value from 35 to 70. The default value is "45". In the second box enter a value from 35 to 70. The default value is "40". During Dehumidification, the Coil temperature can be reset within the range created on this screen per the description for *Setpoint Screen #13*. If no reset is desired, set both the low and high setpoints to the same value.

Setpoint Screen #15

VCCX2 Spts ID: 0001 Static Pressure Setpt: 1.50"WG Deadband: 0.10"WG

In the first box above enter a value from .10 to 3.0. The default value is "1.5". In the second box above enter a value from

.01 to 0.5. The default value is ".10".

Setpoint Screen #16

VCCX2 Spts ID: 0001 Static Pressure Reset Max Limit: 1.50"WG Min Limit: 1.50"WG

In the first box above enter a value from .10 to 3.0. The default value is "1.5". In the second box above enter a value from .10 to 3.0. The default value is "1.5".

Setpoint Screen #17

VCCX2 Spts ID: 0001 Static Pressure Reset Interval: 15Min

Enter a value from 10 to 60. The default value is "15".

Setpoint Screen #18

VCCX2 Spts ID: 0001 VFD Speed Limits Min Cool: 30% Min Vent: 20%

In the first box above enter a value from 0 to 100. The default value is "30". In the second box above enter a value from 0 to 100. The default value is "20". If this unit is configured for Single Zone VAV operation, the Min Cool Percentage will be the fan speed at which the VFD will start operating at when cooling is initiated. It can then modulate up to 100% as the space temperature rises within the range created by the Cool Low Reset Source and the Cool High Reset Source Setpoints entered in Setpoint Screen #21. If this is a CAV or MUA unit, this should be set to 100%.

The Min Vent Percentage is the speed at which the fan will operate at during the Vent Mode.

Setpoint Screen #19

VCCX2 Spts ID: 0001 VFD Speed Limits Min Heat: 50% Max Heat: 100%

In the first box above enter a value from 0 to 100. The default value is "50". In the second box above enter a value from 0 to 100. The default value is "100". If this unit is configured for Single Zone VAV operation, and you have a modulating heat source that will allow VAV heating, then the Min Heat Percentage will be the fan speed at

which the VFD will start operating at when heating is initiated. It can then modulate up to the Max Heat Percentage as the Space Temperature falls within the range created by the Heat High Reset Source and the Heat Low Reset Source created in Setpoint Screen #23. On a standard VAV unit, if the VFD Signal falls below the Minimum VFD Heat Setpoint during the Heating Mode, Heating will be disabled. If this is a CAV, MUA, or Single Zone VAV with CAV Heating, these setpoints should both be set at the same value which represents the constant speed you want the fan to operate at during the Heating Mode.

Setpoint Screen #20

VCCX2 Spts ID: 0001 Supply Air Cooling Setpoint: 55.0°F Hi Rst Limit: 55.0°F

If no Reset Source has been configured in *Configuration Screen #11*, then this Setpoint will be the SAT Cooling Setpoint. Line 4 will be blank. If a Reset Source has been configured in *Configuration Screen #11*, then Line 4 will read Hi Rst Limit.

In the first box above enter a value from 30 to 80. The default value is "55". In the second box above enter a value from 0 to 100. The default value is "55".

VCCX2 Spts ID: 0001 Cool Rst Source Spts High Reset: 75.0°F Low Reset: 70.0°F

If no SAT Reset Source has been configured in *Configuration Screen #11*, you can disregard this screen.

If a SAT Reset has been configured, please see the instructions for *Setpoint Screen #21* in the *VCCX2 Controller Operator Interfaces SD Technical Guide* for detailed information.

In the first box above enter a value from 0 to 150. The default value is "75". In the second box above enter a value from -30 to 150. The default value is "70".

If using Preheat-EXT, in the first box above enter a value from 0 to 90. The default value is "40". In the second box above enter a value from 0 to 90. The default value is "60".

Setpoint Screen #61

VCCX2 Spts ID: 0001 Preheat-X Spts Vent Mode: 50.0°F

If using Preheat-X, in the box above enter a value from 35 to 90. The default value is "50".

If using Preheat-EXT, in the box above enter a value from 0 to 90. The default value is "50".

Setpoint Screen #62

VCCX2 Spts ID: 0001 Superheat Setpoint: 15

In the box above enter a value from 1 to

30. The default value is "15".

Setpoint Screens #63-68

Setpoint Screens #63 through #68 allow you to calibrate any sensors that are not reading correctly. In the boxes below for the sensor(s) you wish to calibrate, enter a value from -100 to +100 (-500 to +500 for the CO_2 Sensor). The default value is "0". The current value shown on Line 3 is the actual temperature the sensor is reading plus the offset temperature amount you enter.

VCCX2 Spts ID: 0001 Space Sensor Cal Current: 0.0°F Offset: 0.0°F

VCCX2 Spts ID: 0001 Return Sensor Cal Current: 0.0°F Offset: 0.0°F
